

Charge-upfront payment update — plan for review

RetrackThis · September 21, 2026 · For Damian (security / money review)

Status: **implemented locally, not committed / not deployed** · Deploy gate: Bryon awards the live keyboard gig on the *legacy* escrow hold first

Maps to finding IDs in `D-critic-consolidated.md` (D-1...D-10)

Ask. Please review this design against your Sept 20 critic notes before we push to `main`. Code exists in Luke's working tree only. Production still runs manual-capture escrow. We will not deploy until the open keyboard job is awarded and paid on the old path.

1. Why this change

Legacy jobs authorize the card with `capture_method: manual`. Stripe holds die ~7 days. The violin job hit that wall; the keyboard job is the same shape. Charge-at-post via **Stripe Checkout** (auto-capture) removes the hold timer. Money sits on the platform until award → Connect transfer (or admin manual PayPal/Wise).

You already agreed charge-at-post is the right product move *if* refunds, claim locks, cron sweeps, price ceiling, and idempotency ride along. This plan is that “same change,” not Checkout bolted on alone.

Live constraint right now. Aaron submitted a keyboard take; Luke reviewed — usable. Bryon still needs to **End gig & pay** on production (old path) before the hold expires. Deploying Checkout before that award is an unnecessary risk on that one job.

2. New job money lifecycle

POST /api/jobs

- create Job status = PENDING_PAYMENT + Payment (pending PI placeholder)
- Stripe Checkout Session (mode=payment, idempotencyKey job_checkout_{jobId})
- producer pays on Stripe-hosted page

checkout.session.completed (webhook) OR GET confirm-checkout fallback

- Payment.status = captured, store real PI id (@unique)
- Job.status = OPEN (+ invite / new-job emails)

Producer: End gig & pay / cron finalize

- claim OPEN → AWARDING (updateMany count===1; resume after 30s if stuck)
- if PI requires_capture: capture (legacy holds) else already succeeded
- transfers.create (idempotencyKey job_transfer_{jobId}) OR pending_manual_payout
- Job = AWARDED

Producer cancel / unpaid abandon / cron no-winner past grace

- claim → CANCELLING
- requires_capture → PI cancel
- succeeded → refunds.create (idempotencyKey job_refund_{jobId})
- unpaid Checkout → sessions.expire
- Job = CANCELLED

checkout.session.expired → abandon unpaid PENDING_PAYMENT draft

Legacy keyboard job stays OPEN + authorized PI until Bryon finalizes. New statuses are additive; old code paths still capture when requires_capture .

3. Scoreboard vs your D-findings (this cutover)

ID	Ask	In this update?	Notes
D-1	Price ceiling; later Radar / disputes / payout delay	CEILING REST DEFER	Server MAX_PRICE_CENTS (\$500) + integer check on POST. No dispute handler / delay / Radar yet — founder track.
D-2	refunds.create on succeeded PI; never write cancelled over captured	DONE	cancelJobAndRefund : retrieve → cancel hold / refund succeeded / expire unpaid Checkout. Writes refunded when refunded.
D-3	Atomic OPEN→AWARDING before Stripe; cancel claim too	DONE	claimJobForAward ; cancel uses CANCELLING. Stuck AWARDING resumable after 30s via moneyClaimedAt . Capture/transfer/refund/checkout idempotency keys.
D-4	Move money sweeps off public GET → cron	DONE	GET /api/cron/jobs + hourly vercel.json . Bearer CRON_SECRET . Public/admin job GETs no longer finalize/refund/remind.
D-5	Cron + hold-aware finalize; webhook close paths	MOSTLY	Cron runs finalize + cancel retry + reminders. checkout.session.expired abandons drafts. Full payment_intent.canceled →job close still thinner than ideal.

ID	Ask	In this update?	Notes
D-6	@unique PI; webhook allow-lists; onboard claim	PARTIAL	stripePaymentIntentId @unique + Checkout activate path. Broader payment-status allow-lists / dispute / onboard claim: not this PR's focus.
D-7	Ceiling, integer, metadata, idempotency	DONE	Checkout + PI metadata; idempotency on checkout/capture/transfer/refund.
D-8	No payout email to creator JSON; ledger later	EMAIL LEDGER	select-winner message no longer returns musician payout email. Ledger week-1.
D-9	Confirm step on pay buttons	DEFER	Nice-to-have; not blocking Checkout.
D-10	Deadline cap + reminder blast skip	DONE	Form/server aligned to 7-day max with Checkout. Three-day reminder skips short windows and brand-new jobs.
D-11+	Private storage / preview policy	DEFER	Out of scope for money cutover. Founders still need a preview policy decision (full MP3 + free cancel + charge-upfront is the combo you flagged).

4. Schema / status machine

Value	Meaning
PENDING_PAYMENT	Draft; not on the musician board until Checkout completes.
OPEN	Live gig; takes accepted.
AWARDING	Claimed for payout; Stripe in flight. UI shows "Paying"; retry after 30s if stuck.
CANCELLING	Claimed for refund/expire; Stripe in flight. Cron retries stuck rows.
AWARDED / CANCELLED	Terminal.

New column: `Job.moneyClaimedAt` (nullable) for crash-resume on AWARDING. Migration file: `prisma/migrations/20260921040000_award_cancel_claims/` — **not applied to prod yet**. Earlier `PENDING_PAYMENT` / Checkout columns migration was already applied to Supabase.

5. Primary files to review (uncommitted)

- `lib/jobActions.ts` — claim, finalize, cancel/refund, `runJobMaintenance`
- `lib/checkoutActivate.ts` — activate on paid session; abandon expired unpaid
- `app/api/jobs/route.ts` — POST Checkout; GET list only (no money sweeps)
- `app/api/cron/jobs/route.ts` — Bearer `CRON_SECRET`; hourly
- `app/api/webhooks/stripe/route.ts` — `checkout.session.completed` / `expired`
- `app/api/jobs/[jobId]/confirm-checkout/route.ts` · `resume-checkout/route.ts`
- `app/api/jobs/[jobId]/select-winner/route.ts` · `cancel/route.ts`
- `prisma/schema.prisma` + migration `20260921040000_...`
- `vercel.json` — cron schedule `0 * * * *`
- UI: `PostJobForm.tsx`, `CreatorView.tsx`, FAQ/terms copy

6. Manual prep (Luke) — already done vs still needed

Done 2026-09-20 (no code deploy):

- Live Stripe webhook destination for `https://retrackthis.com/api/webhooks/stripe` now includes `checkout.session.completed` and `checkout.session.expired` (existing PI events kept).
- Vercel Production env `CRON_SECRET` set (16-char memorable secret; value not in repo). Cron route not live until deploy.

With deploy (after keyboard award):

- Apply migration `20260921040000_award_cancel_claims` (additive enum values + column).
- Push / deploy payment branch — first deploy that uses `CRON_SECRET` and Checkout handlers.
- Smoke: post→Checkout→OPEN; abandon draft; cancel→refund; award→transfer only (no second capture).
- Confirm webhook deliveries for `checkout.session.completed` return 200.

7. Explicitly deferred (founder track — not pretending closed)

- Dispute / Radar / first-payout delay (rest of D-1)
- Payout ledger (D-8 full)
- Private bucket + preview policy (D-11...)
- Confirm dialog on End gig & pay (D-9)
- Rate limits / audit / Demo Mode kill-switch hardening (D-20, D-22)
- Product: cancel/refund fee policy once money is captured upfront

Review asks for Damian

1. Is the AWARDING / CANCELLING claim + 30s resume + idempotency keys enough to close D-3 for v1, or do you still want `stripeTransferId` / `paid takeId` persisted in the same write before calling this shippable?
2. Any objection to hourly cron (vs `*/15`) for finalize/refund/reminders?
3. Anything in the Checkout activate / abandon path you'd block on before live money?
4. Confirm deferred list is acceptable for "safe enough for live money" under charge-upfront, given storage/preview remains a separate epic.

8. Proposed ship sequence

1. Bryon: End gig & pay on keyboard (legacy hold) — **blocker for deploy**.
2. Damian: review this plan (+ optional skim of files in §5).

3. Luke: commit payment update on a branch / PR (or main with agreed window).
4. Apply claim migration → deploy → smoke §6.
5. Watch first real Checkout job end-to-end; then reopen piano / next Bryon gigs on the new path.

This PDF describes the *planned / locally implemented* cutover. It is not a claim that production already runs Checkout.
